

SpringCM Solution Data Sheet

CLOUD VS. ON-PREMISES SOFTWARE

12 IMPORTANT REASONS TO CHOOSE CLOUD ECM OVER TRADITIONAL INSTALLED SOFTWARE

The Cloud model provides tremendous advantages over traditional on-premises software implementations. To help you make the right choice, consider these 12 reasons why you should consider SpringCM ECM Cloud for your next document management or workflow solution.

REASON 1 – RAPID DEPLOYMENT.

SpringCM can have you up-and-running in days or weeks — not months or even years like on-premises systems — with no hardware or software to install and no servers to buy. That estimate doesn't even count all the customization you have to do with on-premises applications. The easy-to-use browser interface minimizes the SpringCM user adoption time frame, meaning your time-to-value will be much faster.

REASON 2 – COMPLETE SOLUTIONS OUT OF THE BOX.

Solving a typical content management business problem requires the integration of multiple technologies like document management, workflow, scanning, capture, e-mail management, etc. With SpringCM, 22 ECM technologies are pre-integrated. There is no need to add additional modules or pay for expensive and time-consuming integration services.

REASON 3 – LOW COST.

With SpringCM's highly affordable pay-as-you-go service you avoid capital costs for servers, software, and integration.

REASON 4 – LOW RISK.

With an affordable one-year subscription, SpringCM delivers an enterprise class ECM solution without the aggravation of maintenance contracts and upgrade fees.

REASON 5 – NO CAPITAL EXPENDITURE REQUESTS.

SpringCM is paid for on a subscription basis, an operating expense, letting you avoid the hassle of capital expenditure requests. With SpringCM, you can

“For our purposes, SpringCM has the best and most comprehensive service I’ve seen — and we’re not even using all the capabilities yet. I just keep opening up the discussion for how we can use this great resource that we have.”

often enjoy the solution in less time than it takes to gain approval for the capital expenditure request for on-premises software.

REASON 6 – YOUR CONTENT IS MORE SECURE.

SpringCM employs an advanced access-control framework built into the core solution that enables secure authentication, provides advanced logging of user activity and allows administrators to control which users have access to highly sensitive documents. Multiple layers of firewalls ensure high levels of protection against Intrusion detection and security vulnerabilities.

REASON 7 – HIGHER AVAILABILITY AND RELIABILITY.

SpringCM delivers proven higher than many internal IT organizations can deliver. SpringCM's documented disaster recovery plan includes redundant and failover servers, routers and switches.

REASON 8 – GREATER CONTROL OVER ACCESS TO YOUR DATA.

SpringCM hosts your data, but it's your data. It can be downloaded, at any time, by someone with permission — without any IT involvement.

REASON 9 – ENHANCED BUSINESS AGILITY.

SpringCM can be extensively tailored to meet your needs through configuration, not programming. The result is faster time-to-deployment and the ability to take full advantage of SpringCM upgrades as they are released every 10–12 weeks. Your SpringCM application evolves — without costly or complex reprogramming — as your business changes.

REASON 10 – EASY INTEGRATION.

SpringCM allows you to invoke document management and workflow features from within other applications. Users don't need to learn a new system to take advantage of added capabilities. SpringCM also offers a number of ways to integrate your systems — using a flat file or using SpringCM's complete Web services capabilities for seamless integration with other Cloud and installed applications.

REASON 11 – SATISFIED CUSTOMERS.

According to Information Week Analytics Report on Cloud, 92 percent of companies reported that their Cloud implementation had mostly or totally met their expectations. Contrast these numbers with the extensive record of failures for ECM.

REASON 12 – A LEVEL PLAYING FIELD.

With on-demand solutions, every business and department can enterprise class ECM solutions. SpringCM Cloud makes it fast, affordable, and easy to implement and use ECM. And that's a competitive advantage every business can use..
